

Joe Love

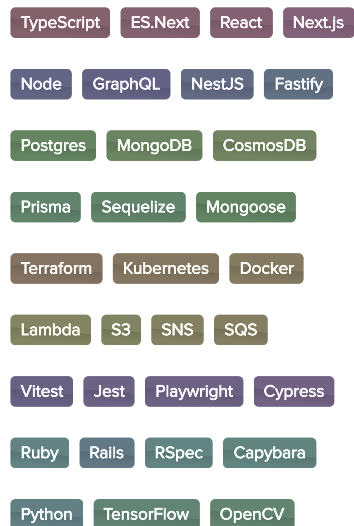

Curriculum Vitae

About

Engineer-turned-founder and three-time CTO with fifteen years of experience shipping ambitious products. Previously Principal Engineer, Tech Lead and Head of Infrastructure at firms across the UK, Europe and the US.

Grows engineering teams from a few developers to an effective cross-functional organisation, and takes products from a whiteboard to something ground-breaking. Treats software engineering as the craft of making hard things look inevitable, and product development as the slower art of deciding which hard things are worth it.
